

PLANVIEW OPENSUITE FOR IBM RATIONAL FOCAL POINT

Integrate IBM Rational Focal Point and Planview Enterprise

Multiple demand pipelines exist for both innovation and maintenance work. Project and portfolio management systems must be able to accept demand from all pipelines, including other prioritization and portfolio management tools.

IBM Rational Focal Point® and Planview Enterprise® offer their respective users the unique functionality they need, but until now, there was not an easy way to cross-pollinate between the two information silos.

Planview OpenSuite for IBM Rational Focal Point bridges the Planview Enterprise portfolio management solution with Rational Focal Point's project prioritization. The solution allows customers to exchange and leverage data to ensure consistency and accuracy of information between systems.

Business stakeholders and project managers can easily connect the output of prioritization processes to operational planning to ensure alignment of resources with priorities. Top priority proposals are exported to Planview Enterprise allowing portfolio and project managers to do supplementary optimization, including financial and resource planning. For proposals selected for implementation, additional detailed project planning and execution are done within Planview Enterprise while attributes and status updates are exported back to Focal Point.

Planview OpenSuite for IBM Rational Focal Point delivers the big picture helping you make more informed decisions about what resources to assign to which kind of work, and those resources can be confident that they are working on the correct projects.
