PLANVIEW OPENSUITE FOR JIRA

Integrate Planview Enterprise with Atlassian JIRA

While portfolio management solutions give product managers visibility into projects within their portfolios, developers often use an issue tracking system such as JIRA® to document their workflows. Detailed and specific, this application wasn't created to offer product managers the high-level view they require, nor does it enable developers to receive valuable insight and direction based on business decisions from product managers. Used separately, these two applications offer respective users the unique functionality they need, but until now, there wasn't an easy way to cross-pollinate between the two information silos.

Planview® has dedicated the past 20 years refining and perfecting a powerful yet easy-to-use portfolio management solution, Planview Enterprise®. The Planview approach includes Planview OpenSuite™, a product line that enables out-of-the-box interoperability with systems including JIRA and many others, enabling Planview Enterprise to leverage existing data from JIRA to ensure consistency and accuracy of data between systems.

A product manager inputs project specifics, such as scope, timeline, and desired output, into Planview Enterprise, and the data is integrated with JIRA. Using JIRA, developers can then establish, assign, and implement the required tasks needed to deliver the requested product. All of the project-level detail is maintained by the developer in JIRA and the product manager receives simple project status updates through Planview Enterprise, with the ability to view more specific information in JIRA if desired.

By importing status and story point values from JIRA, Planview OpenSuite further extends the Planview Enterprise support for Agile development projects. No longer is sharing data between these disparate systems difficult, time consuming, or error-prone. Instead, both product managers and developers can use the applications that work best for their respective roles while still communicating effectively to ensure maximum productivity and efficient delivery of products and services.

Get started today!

Learn how you can get the benefits of Planview OpenSuite at www.planview.com/Opensuite.

Planview OpenSuite

Planview® OpenSuite™ delivers out-of-the-box interoperability between the portfolio management benefits of Planview Enterprise® and the technology solutions you rely on every day. Now, you can easily share data in disparate systems to make the most informed decisions, while enabling those systems to do what they do best – manage IT service delivery, control the product development lifecycle, ease collaboration and productivity, and more – without dedicating scarce technical resources to the often arduous task of integration.

Use Planview OpenSuite for JIRA to:

- Accelerate JIRA integration projects
- Maximize your investment in legacy applications
- Leverage reusable composite data services
- Reduce costs and project risks by eliminating custom-coded adapters
- Enable project managers and developers to communicate in their own language
- Improve efficiency, productivity, and collaboration
